**LET'S GET
TO WORK**
RE-ENGINEERING AMERICA.

A NEW AMERICA.

Connecting America to a Brighter Future Through Kimball Technology

President Obama's Recovery and Reinvestment Plan presents a once-in-a-lifetime opportunity for many organizations that are ready to get to work now. As the country begins implementing this new program, a re-engineered America will communicate and grow through broadband services, telecommunications and data networks implemented by Kimball. We help local and state governments, public safety agencies, 9-1-1, businesses, utility companies, schools and other institutions design and implement their communications and technology needs including broadband, data management, next generation networks, geographic information systems, geospatial services, telecommunications, radio and wireless, and security systems.

At a time when the nation is focused on extending broadband services to rural schools and businesses, bolstering the technological foundations of a national public safety service, and digitizing our work processes, Kimball's dedicated communications technology group offers the deep experience needed to realize these goals rapidly and effectively.

Connect with Kimball's Size, Scope, Diversity and Experience

Over the past 56 years, Kimball has designed, planned and implemented thousands of projects in the arenas of architecture, engineering, technology and consulting.

With deep expertise in building America, we offer the scope and stability to launch your project now and help ensure its success.
